EDITOR'S NOTE

The Environmental Protection Research Catalog, sponsored by the Office of Research and Monitoring of the U.S. Environmental Protection Agency, has been compiled by the Smithsonian Science Information Exchange, Inc., from its files of ongoing research Notices as of October 1971. Since research grants may have been transferred from one sponsoring agency to another agency or division within the Government, the supporting agency listed reflects the latest information received by SSIE from the supporting organization at the time this catalog was prepared. In addition to Federally supported research, this volume also includes selected research grants sponsored by private foundations, foreign governments, universities, state agencies and individual scientists.

This compilation is not intended as a complete collection of environmental research, but rather as a selection of ongoing research grants concerned primarily with environmental protection, pollution and contamination, and research involving the deleterious impact of man on his environment. Selection of the research Notices included was based on guidelines established by the Environmental Protection Agency with suggestions from the various contributors. Scope notes preceding each sub-chapter are designed as an aid to indicate the subject area included. Many of the research Notices included in any one chapter or sub-chapter may also be appropriate in other chapters; therefore, use of the Subject Index is recommended in locating specific areas of interest.

The Subject Index is based on terminology developed by the Smithsonian Science Information Exchange, Inc. Specific index terms may be arranged in hierarchies indicating relationships between broader and narrower subject terms. Thus, related terms may be grouped together under a more general subject heading (e.g., PESTICIDES: Insecticides, DDT). Each Index Term is followed by the project title, a list of about six descriptors, and the chapter number of the project. Additional cross-reference information may follow an index term where appropriate. For example, projects concerned with thermal pollution are indicated under THERMAL POLLUTION followed by the cross-reference note "—*see* Water Poll.". Additional thermal pollution studies appear under WATER POLLUTION SOURCES. In other cases, general subject areas may be referred to more specific topics (e.g., RADIATIONS—*see* specifics; or COSTS—*see* Economics Entries).

All investigators cited on the source document are included in the Investigator Index. An asterisk is used to designate the individual specified as "principal investigator" on the source document is, in fact, a program manager who is not working at the contractor location given in the project summary.

The Performing Organization Index is an alphabetic listing of the performing organization and its location.

Due to the time of compilation, not all of the entries in the Supporting Agency Index have been updated to reflect transfers of responsibility to the Environmental Protection Agency. All tasks listed as supported by the U.S. Department of the Interior—FWQA are now supported by EPA. Similarly, substantially all the tasks listed as supported by the U.S. Department of Health, Education, and Welfare—P.H.S. are now supported by EPA) Exceptions would be a limited number concerned with health aspects of radiation and a few concerned with occupational health.

All of the indexes in the Catalog were generated by means of a computer, necessitating a limitation of the number of characters available for index terms and captions. In some instances, abbreviations had to be used.

We hope that the users of this Catalog will advise the Smithsonian Science Information Exchange, Inc. of any errors of omission or commission that have been made. Also critiques of this Volume are encouraged so that future editions may best present their information content by means of format and indexes which are convenient and acceptable to the user.
